ENERGY

There are 3 main stages in a mill, but a substantial amount of equipment

- Crushing

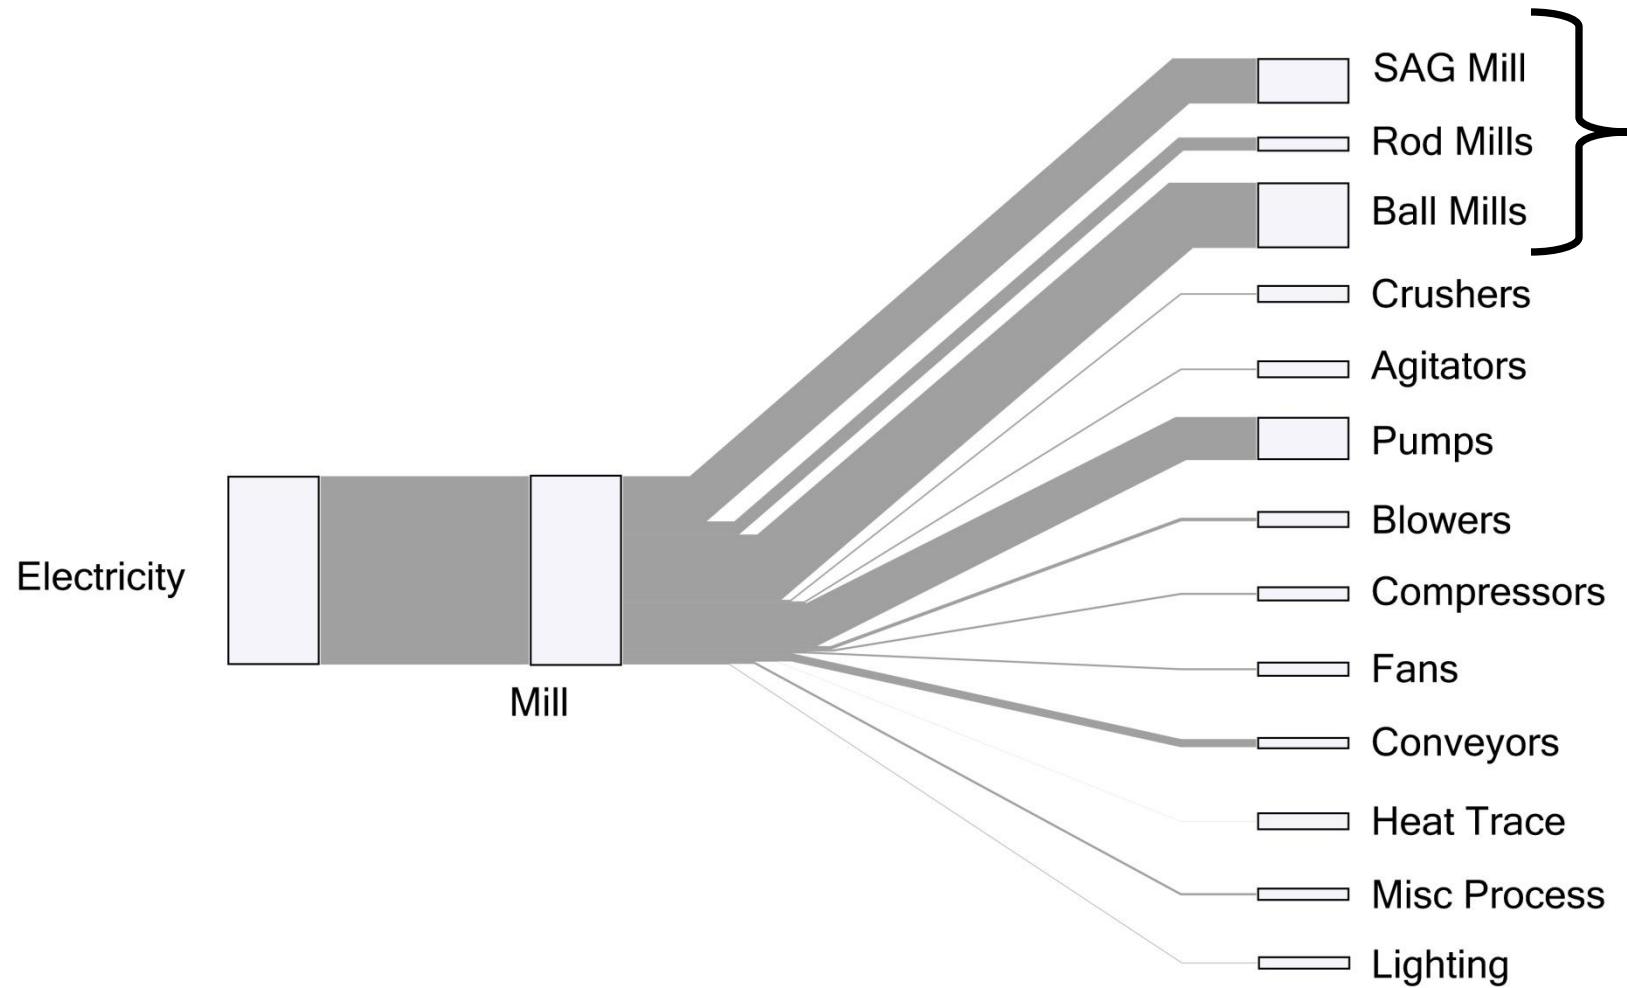

- Grinding

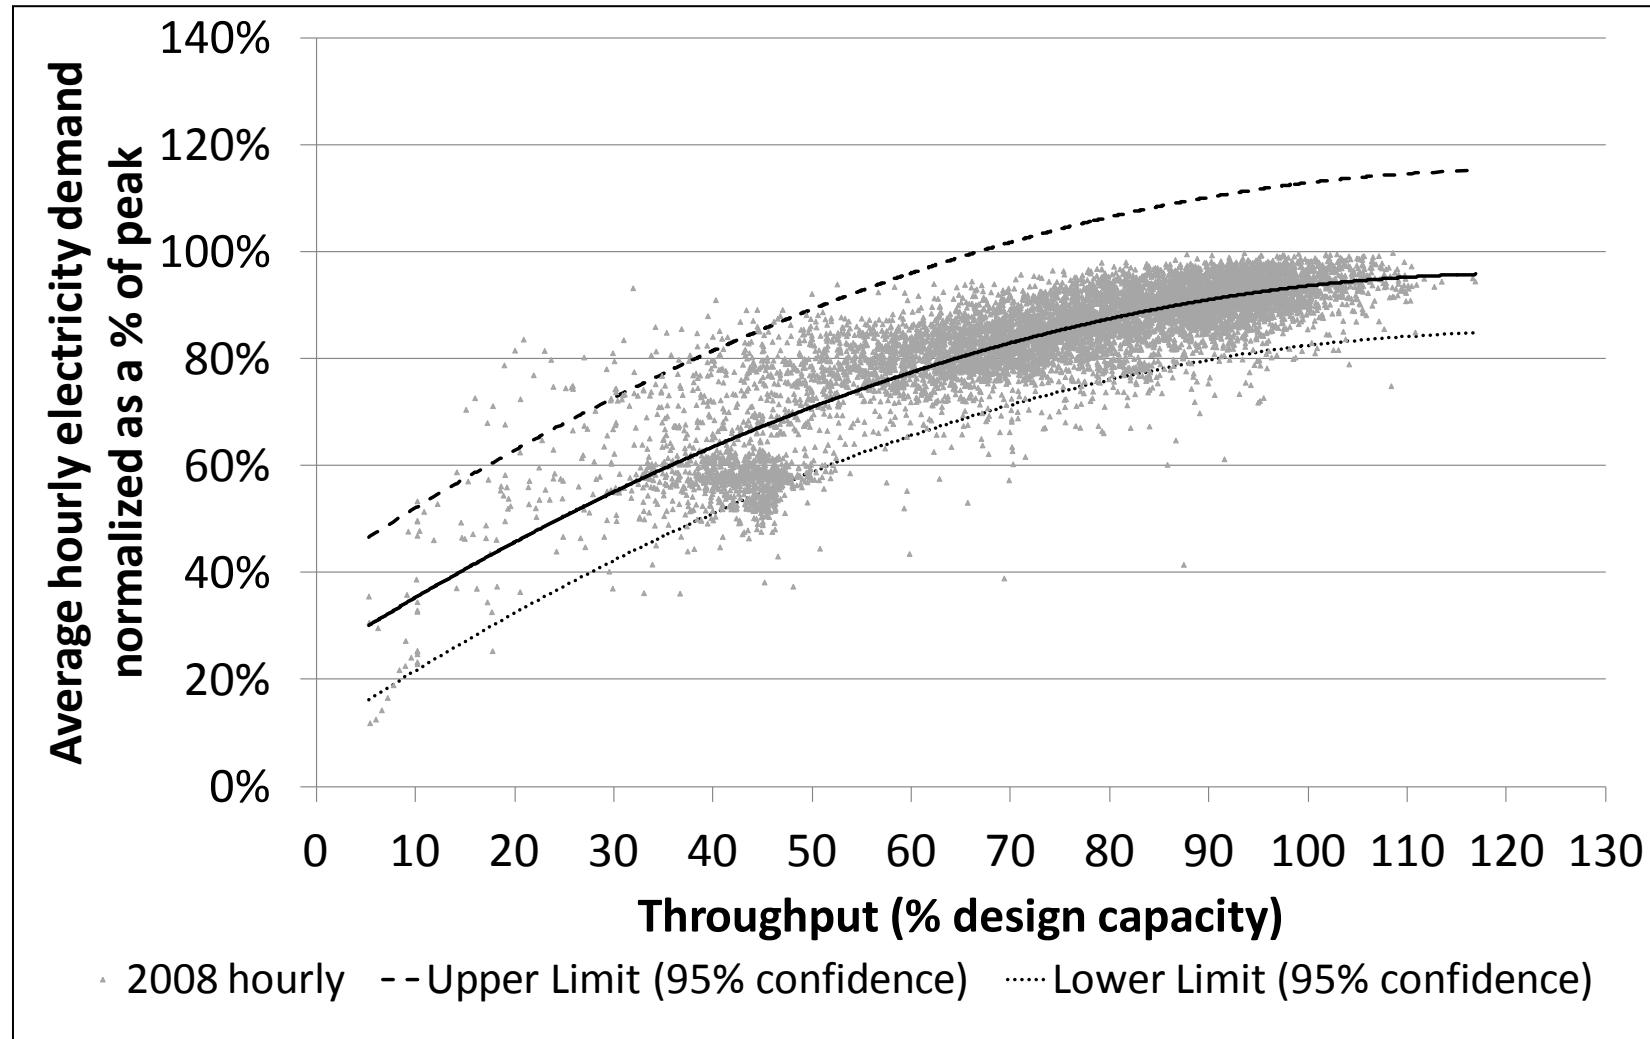

- Separation

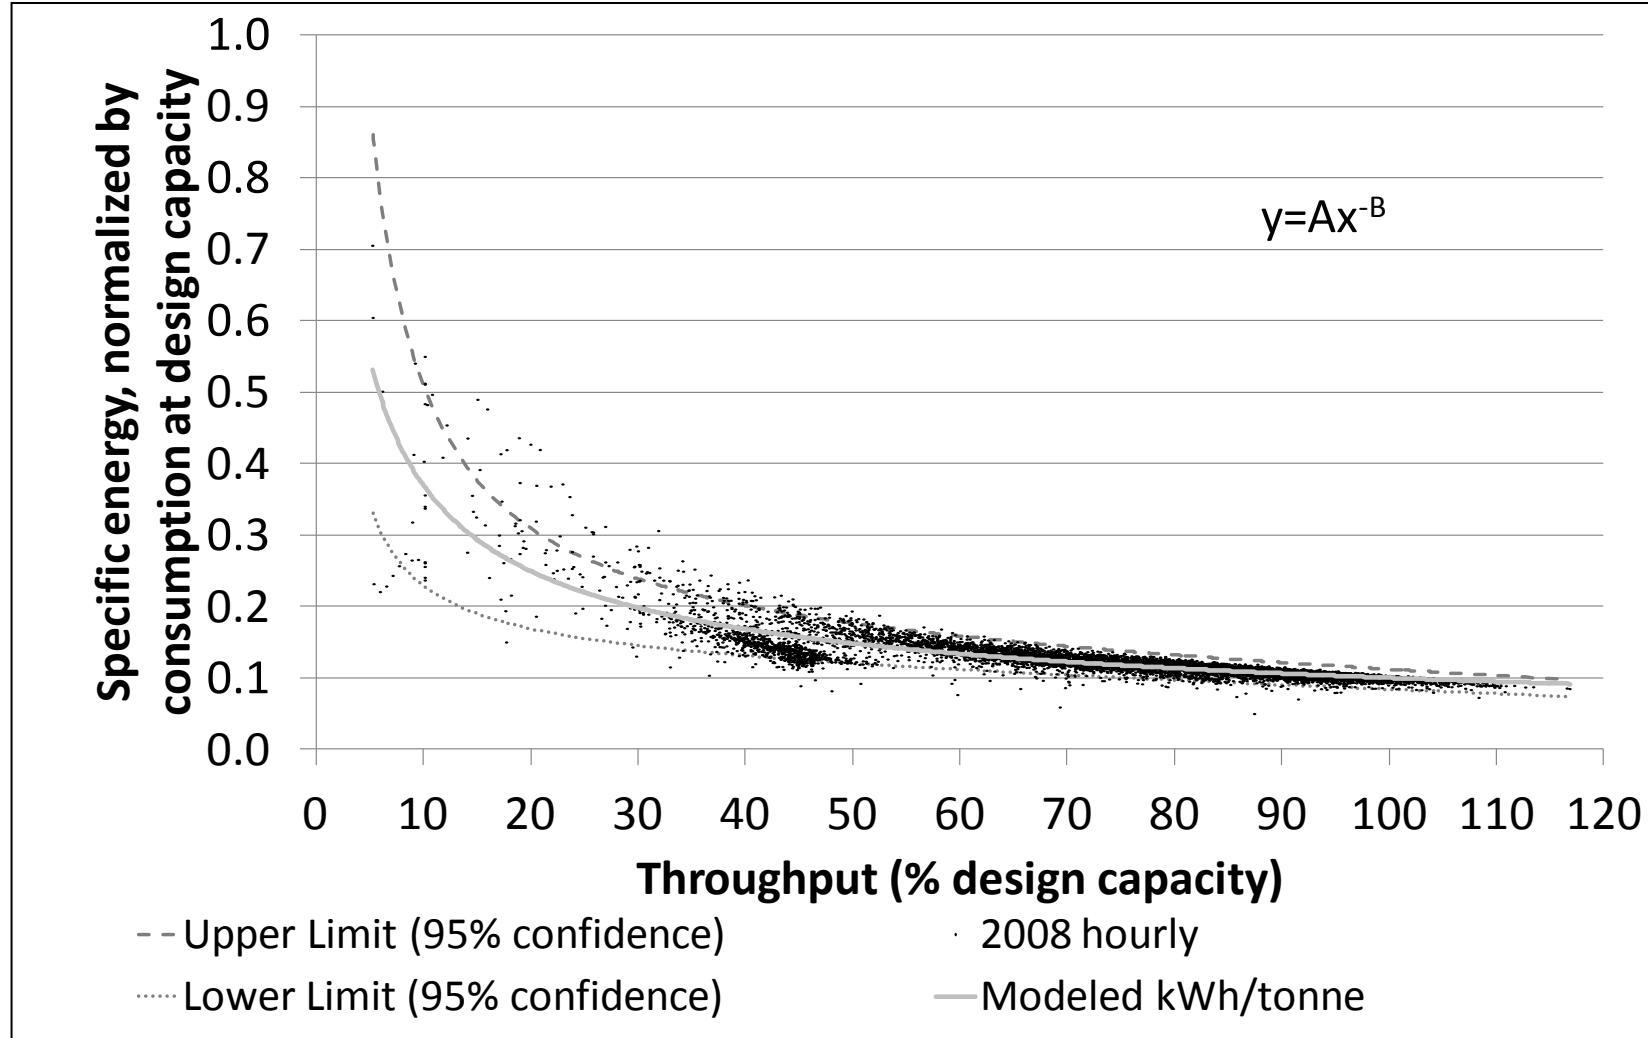

# Most of the electricity in a milling plant is used for grinding

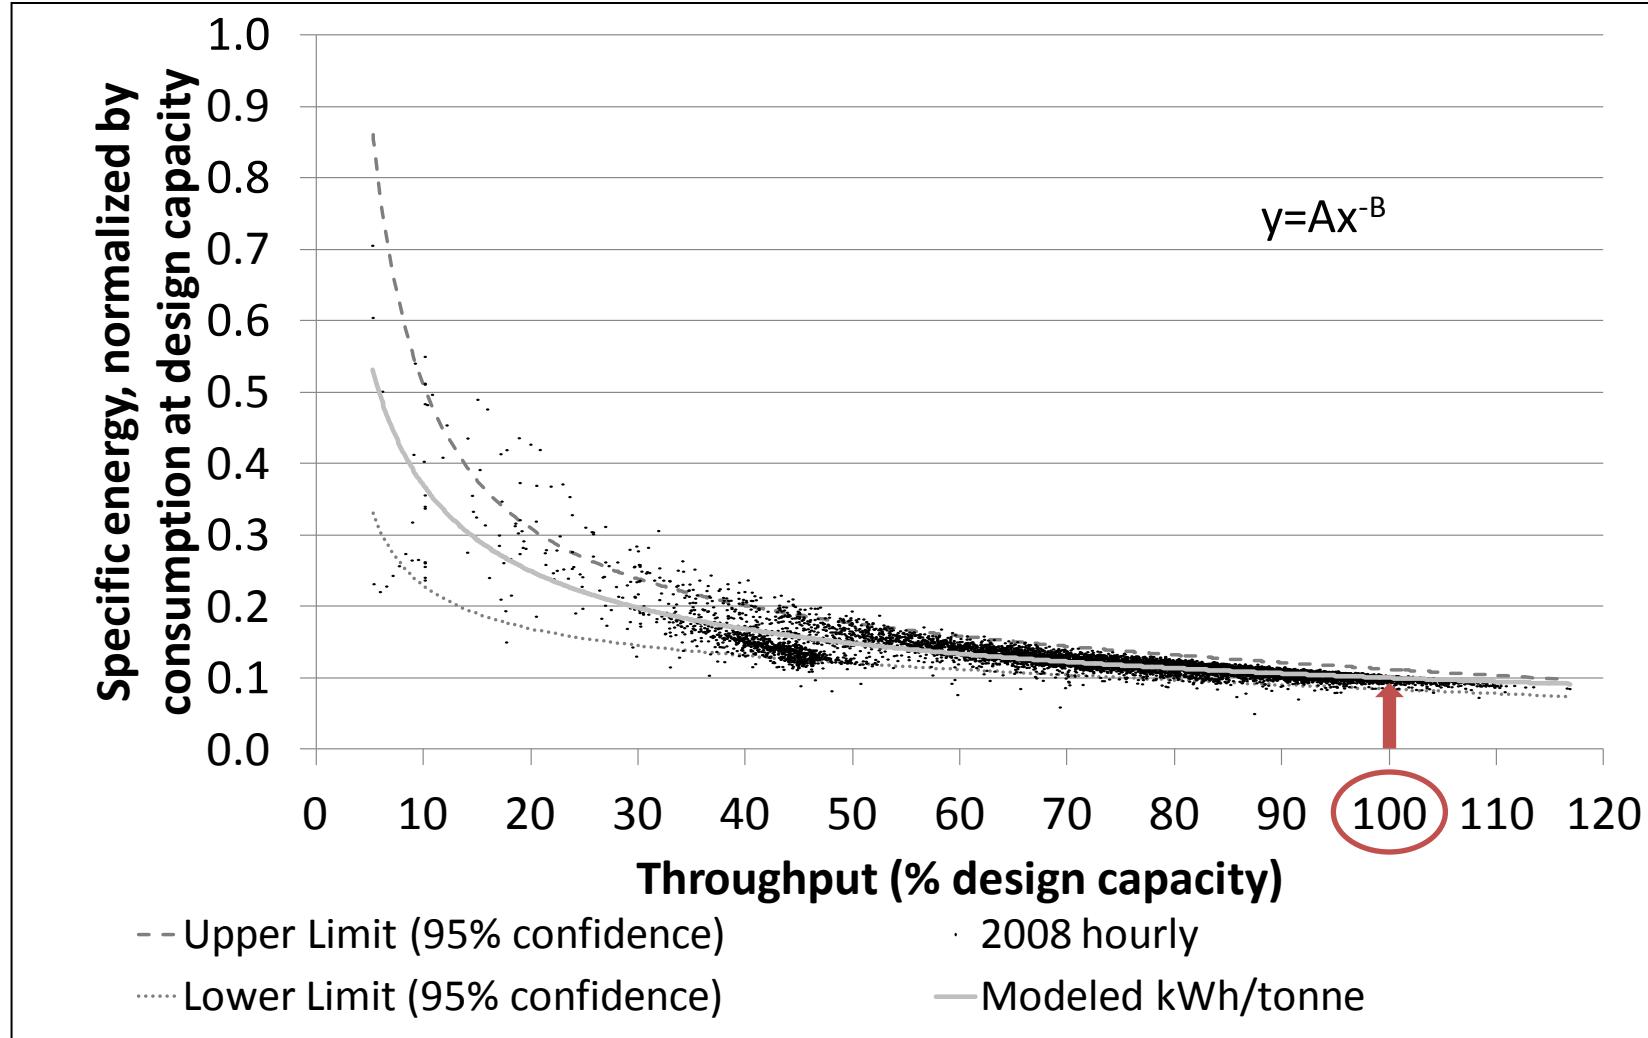

# As throughput is increased, so is electricity demand, but in lower proportion

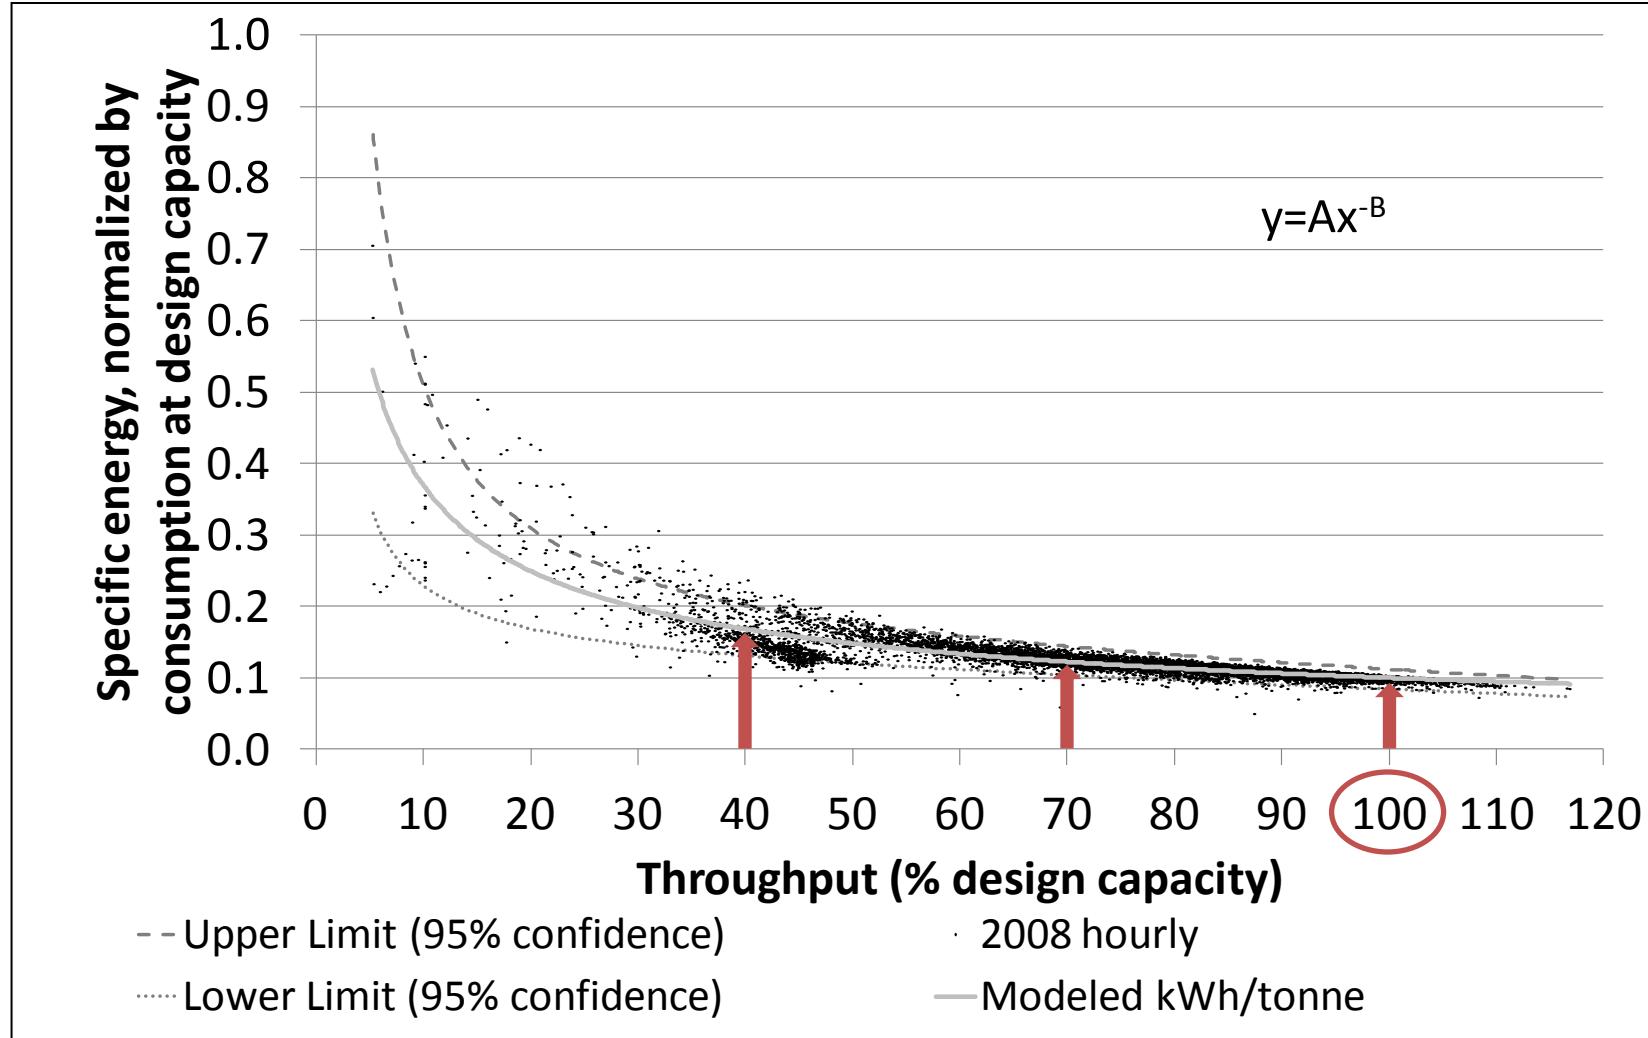

# More electricity is used to process a tonne of ore below design capacity

# More electricity is used to process a tonne of ore below design capacity

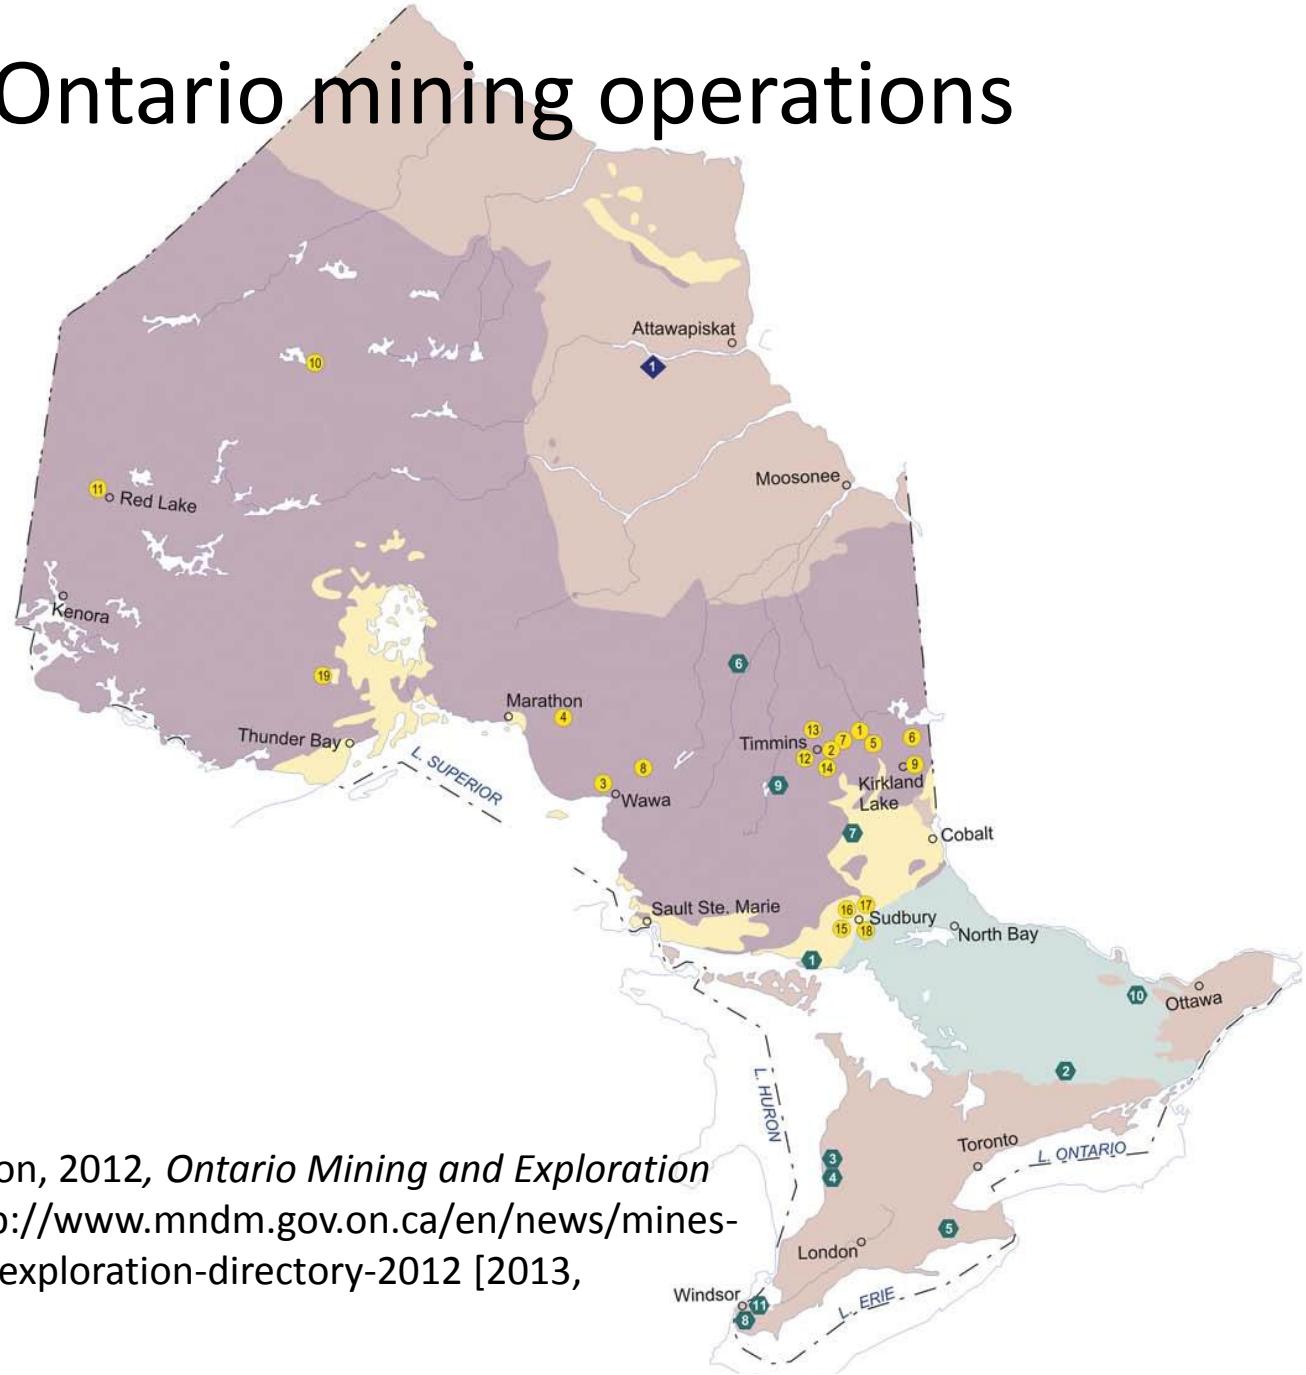

# More electricity is used to process a tonne of ore below design capacity

# 2012 Ontario mining operations

- 3 base metal mills
- 10 gold mills
- 1 PGM mill

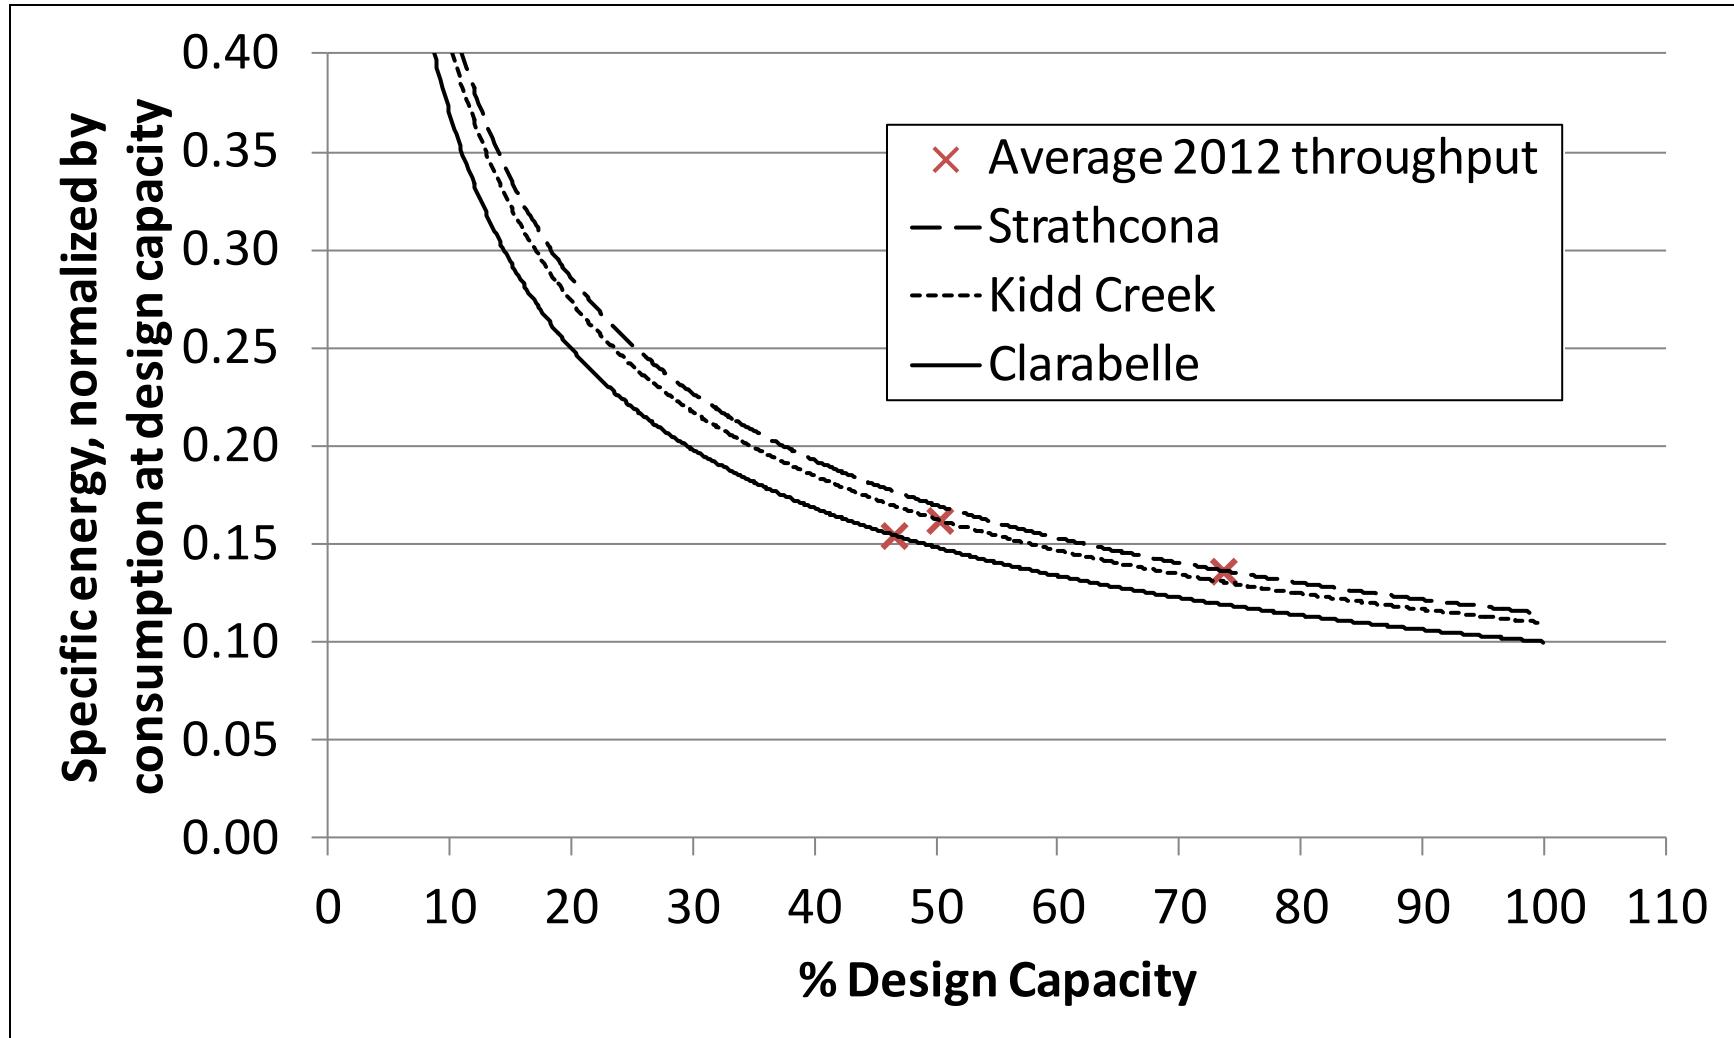

Ontario Prospectors Association, 2012, *Ontario Mining and Exploration Directory 2012*. Available: <http://www.mndm.gov.on.ca/en/news/mines-and-minerals/ontario-mining-exploration-directory-2012> [2013, November 14].

# Base metal mills in Ontario also operate below design capacity

| Company  | Mill       | Design<br>(tonnes<br>per day)         | 2012 annual<br>throughput                           | Utilisation |
|--|------------|---------------------------------------|---|-------------|
| Vale   | Clarabelle | 36,300<br>(Kerr et al, 2003)          | 5,740,700<br>(Vale, 2013; KGHM International, 2013) | 47%         |
| Kidd Operations<br>a Glencore Company                            | Kidd Creek | 12,329<br>(Thwaites, 1983)            | 2,268,672<br>(Xstrata, 2013)                        | 50%         |
| Sudbury<br>Integrated Nickel<br>Operations<br>a Glencore Company | Strathcona | 7,534<br>(Gencore Xstrata plc., 2013) | 2,029,753<br>(Xstrata, 2013)                        | 74%         |

# Part load curves for mills can be shifted to reflect economies of scale

# Energy penalties arise from operating below design capacity

---

| Mill       | Potential savings<br>(2012) |
|------------|-----------------------------|
| Clarabelle | 36%                         |
| Kidd Creek | 32%                         |
| Strathcona | 16%                         |

| <b>Company</b>             | <b>Mill</b>       | <b>Utilisation</b> |
|----------------------------|-------------------|--------------------|
| Kirkland Lake Gold Inc.    | Macassa           | 59%                |
| Goldcorp Inc.              | Red Lake/Campbell | 76%                |
| Goldcorp Inc.              | Musselwhite       | 79%                |

| Lake Shore Gold Corp.      | Bell Creek        | 98%                |
| Goldcorp Inc.              | Dome              | 103%               |
| Wesdome Gold Mines Ltd.    | Eagle River       | 120%               |

9 out of 10 gold mills have higher utilisation than base metal mills

# There are solutions to low utilisation

Modular design

Modify schedule

Parallel line operation

Batch operation

Maximize throughput

Maximize throughput

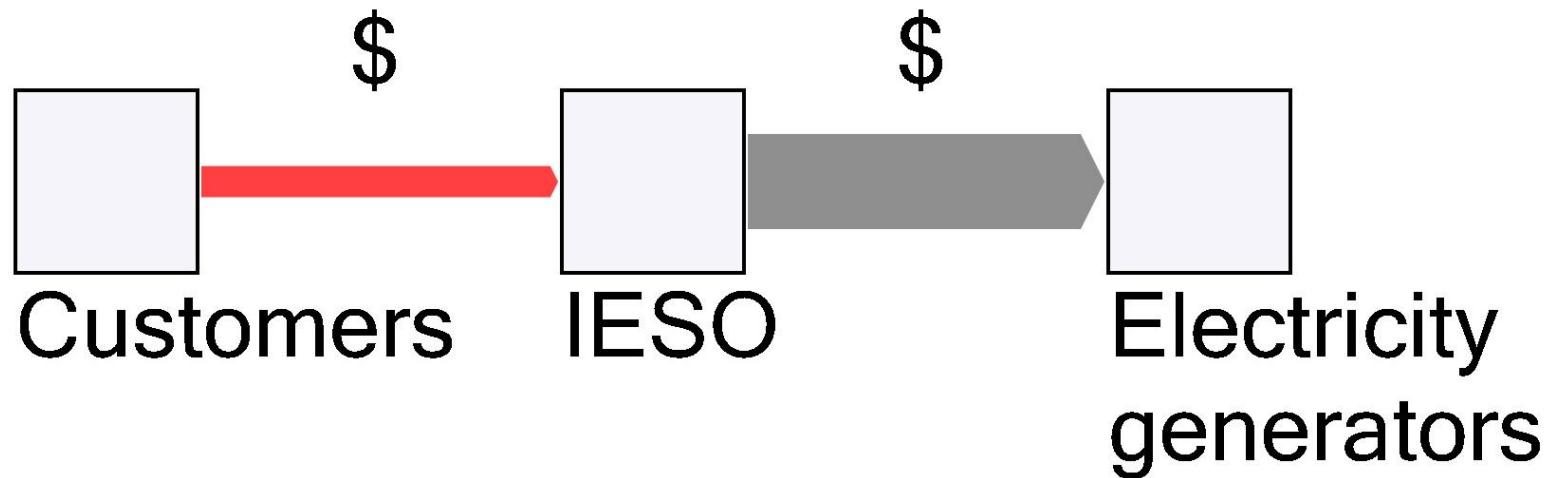

# NAP's Lac des Iles mill has already realized such benefits

2012 schedule: 14 days on, 14 days off

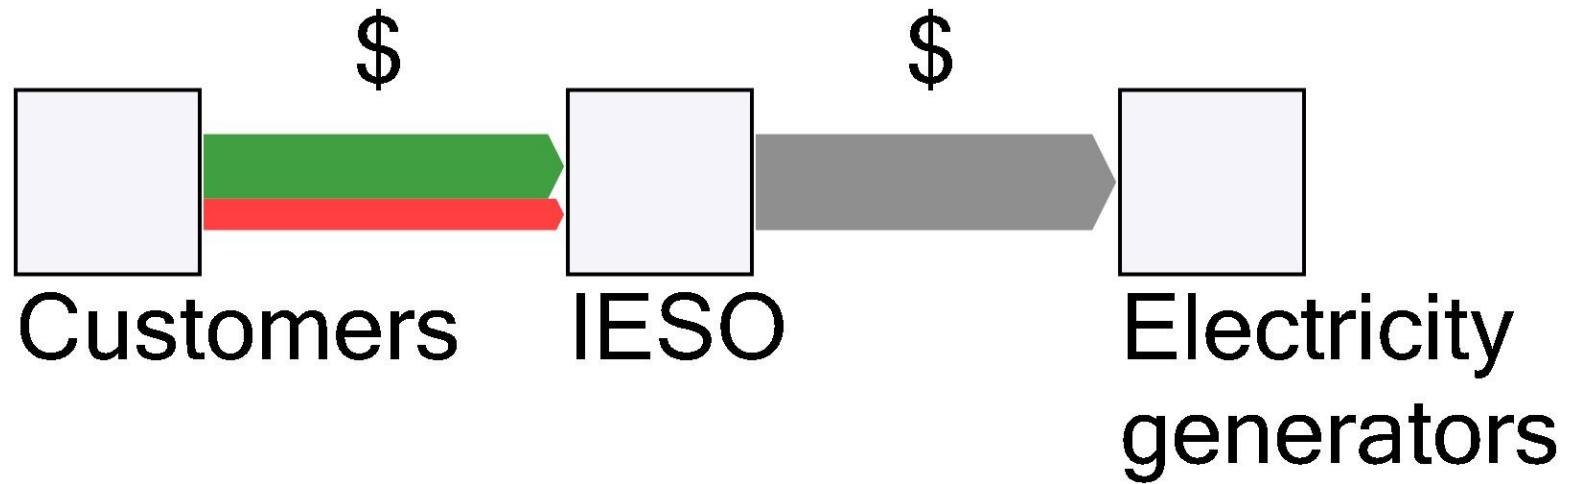

| Design<br>(tonnes / day) | 2012 annual<br>throughput | Utilisation |     |
|--------------------------|---------------------------|-------------|-----|
|                          |                           | Actual      | BAU |
| 15,000                   | 2,063,260                 | 75%         | 37% |

North American Palladium, 2013

# Hourly rates paid by customers don't cover the rates paid to generators

# Hourly rates paid by customers don't cover the rates paid to generators

# A flexible schedule offers potential for further savings due to 5CP billing

- Coincident peak (CP) pricing mechanism
- Class A: average peak demand > 5MW or average peak demand > 3MW for certain sectors
- Global Adjustment (GA) = difference between HOEP and contract rates
- Share of Ontario demand during 5 peak hours determines share of GA

# The cost of a MW in Ontario is rising

| Year | Total hourly<br>cost<br>(million CDN\$) | Global<br>adjustment<br>(million CDN\$) | Average<br>demand<br>charge (\$/MW) |
|------|---|---|-------------------------------------|
| 2011 | 4,451                                   | 5,310 (54%)                             | 217,406                             |
| 2012 | 3,404                                   | 6,456 (65%)                             | 273,004                             |
| 2013 | 3,725                                   | 7,727 (67%)                             | 323,537                             |

\* January to February 2014 - GA constitutes minor share of total cost.
